EDUCATION

University of Cincinnati

Bachelor of Science, Mechanical Engineering

May 2027

EXPERIENCE

Design Engineering Co-Op

January - August 2026

Nova Design

- Supported a variety of end-to-end product design cases for startup companies, integrating mechanical and industrial design to develop functional production-ready solutions
- Applied injection molding principles and material testing to create in-house prototypes, and fine-tune the preliminary design of products with a user-focused objective
- Advanced the development of a new product concept into early stages of manufacturing by producing various mechanical solutions and formulating a detailed Engineering Requirements Document for client handoff
- Optimized product portfolios for a diverse range of clients by reverse engineering mechanical assemblies and increasing prototype success rate by 40%
- Assisted in the development of compelling project proposals by turning technical concepts into clear timeline and cost estimates with physical deliverables to meet client needs.

Manufacturing Engineering Co-Op

May – August 2025

RH Aero

- Collaborated with engineering and production teams to create standardized assembly instructions, ensuring alignment across shifts, improving product quality and lead time by 25%
- Applied LEAN Manufacturing principles by creating efficient workstation layouts to optimize flow, reduce operator movement by 50% and improve assembly productivity
- Created and supervised 60+ production travelers to guide assembly processes, ensuring accurate routing, traceability, and adherence to build requirements

Process Engineering Co-Op

August – December 2024

Thyssen-Krupp Bilstein

- Successfully designed and implemented process flow solutions for incoming product lines, improving station ergonomics, and reducing cycle times by 25%
- Led cross campus FMEA/RFMEA action events, reducing injury related downtime by 2 hours monthly
- Successfully developed and administered airflow and energy test solutions used across departments, reducing monthly downtime by 2 hours
- Reengineered and implemented existing manufacturing tooling, saving \$30,000 in initial production expenses

Engineering Co-Op

January – April 2024

Schneider Electric

- Created production documentation for current and new equipment to clearly indicate safe and effective operator usage
- Devised system for material delivery to production line, reducing waste and improving cycle time by 60%
- Eliminated underutilized tooling throughout facility, improving space utilization for incoming production line
- Spearheaded new equipment acquisition, performing manufacturing and ergonomic studies to guarantee compatibility and increase station productivity

SKILLS

CAD Simulation: SolidWorks, StarCCM+, Inventor, AutoCAD 3D Printing, Technical Documentation, Siemens Nx, Autodesk

Programming: LabView, Python, MATLAB, VBA, Microsoft 365, Arduino

Visual & Graphic Design: Davinci Resolve, Premiere Pro, Photoshop, Lightroom, Illustrator
